	Installation of Mains Water at Marshlands Road Allotment Site		CE1/14a

At the Council budget meeting in January, a sum was set aside for potential installation of mains water at Marshlands allotment site.

United Utilities will provide a mains connection up to the entrance point on the Marshlands Road pavement and from there we will need to arrange connection to the site and install the tap. We have assessed the site for the onsite trenching/installation works and have decided on a route that will be the shortest and least disruptive (see images below).

The red line on the plan above indicates where a trench will need to be dug along the path and the tap will be installed on the allotment side of the fence on an access path between two plots (see images below).

As the trenching work will be on the access path to the field, permission has been sought from CWaC to undertake this work and a response is awaited.

If Committee approves the United Utilities quotation and CWaC provides permission to undertake trenching work, quotations will be sought for the onsite installation phase.
